

collabor8

Hubio Insurance Portal Solutions

The **collabor8** portal allows brokers, policyholders and underwriters to collaborate seamlessly, online, through the lifecycle of a policy, enabling straight-through-processing and improved ease of doing business.

collabor8 provides user-centric views to enable more accurate data capture and broker/CSR/underwriter collaboration, regardless of point of sale and line of business.

collabor8 provides pre-built forms and logic to personal Auto and Property and specialty lines, including Farm and Agribusiness, to speed-up the initial implementation.

collabor8

Underwriter & Broker Needs

collabor8 runs multiple internal and external portals from a single server. The configuration editor supports the design of multiple web portals including layout, styling, business rules, workflow and localization.

Agent/Broker Desktop: This accommodates how the broker transacts with both the end-customer and the carrier. Quoting, Quote Management and all elements of New Business are coordinated to reflect the broker's sales and service operating environment, enabling underwriting at the point of sale.

A broker can start a transaction directly within their Broker Management System and upload

the new business information, using the portal as the staging area or landing page to continue the transaction, making corrections or additions, or validating the submission.

The broker or policy holder can also access the carrier's secure website to begin new business transactions, to make inquiries or to edit existing quotes and policies, in a user-friendly, intuitive interaction.

Key Benefits

Ease of doing business for both Brokers and Underwriters - as a staging area to review, edit, re-work uploaded material, or for direct data input from brokers, underwriters and policy holders.

Straight-through-processing capabilities – saving underwriters time, and reducing administrative burden.

Farm and Agribusiness portal enables insurers and brokers to quote, underwrite and bind smoothly, quickly, and with a high degree of accuracy and consistency.

Easy to Use sales and service workflow made for brokers and underwriters – not limited by Policy Administration System constraints.

Expanded and Flexible channel for business acquisition, that facilitates real-time quoting, binding, and policy change.

Once-and-Done data entry, producing reduced touch time and cycle time during the underwriting process.

Streamlined Process Times: improved underwriting accuracy and overall completeness, consistency and efficiency.

Reduced IT Deployment and maintenance costs through the use of a tools-and-standards-based platform.

Capability to quickly and easily change business rules.
